### **EXP 3: Evaluation of Prompting Tools Across Diverse AI Platforms: ChatGPT, Claude, Bard, Cohere Command, and Meta**

**Aim:**

- To compare the performance, user experience, and response quality of different AI platforms (ChatGPT, Claude, Bard, Cohere Command, and Meta) within a specific use case, such as summarizing text or answering technical questions.

**Instructions:**

**1. Define the Use Case:**

- Select a specific task for evaluation across platforms (e.g., summarizing a document, answering a technical question, or generating a creative story / Code).
- Ensure the use case is applicable to all platforms and will allow for comparison across response quality, accuracy, and depth.

**2. Create a Set of Prompts:**

- Prepare a uniform set of prompts that align with the chosen use case.
- Each prompt should be clear and precise, ensuring that all platforms are evaluated using the same input.
- Consider multiple prompts to capture the versatility of each platform in handling different aspects of the use case.

**3. Run the Experiment on Each AI Platform:**

- Input the prompts into each AI tool (ChatGPT, Claude, Bard, Cohere Command, and Meta) and gather the responses.
- Ensure the same conditions are applied for each platform, such as input format, time to respond, and prompt delivery.
- Record response times, ease of interaction with the platform, and any technical issues encountered.

**4. Evaluate Response Quality:**

- Assess each platform's responses using the following criteria:

**Accuracy, Clarity, Depth, Relevance**

**5. Compare Performance:**

- Compare the collected data to identify differences in performance across platforms.
- Identify any platform-specific advantages, such as faster response times, more accurate answers, or more intuitive interfaces.

### **Deliverables:**

- A comparison table outlining the performance of each platform (ChatGPT, Claude, Bard, Cohere Command, and Meta) based on accuracy, clarity, depth, and relevance of responses.
- A final report summarizing the findings of the experiment, including recommendations on the most suitable AI platform for different use cases based on perform
